Hydration Error

This modal helps with debugging hydration errors by diffing the dom before and after the app hydrated. Before Hydration refers to the html rendered on the server. After Hydration refers to the html rendered on the client. This feature is actively being developed; please share any questions or feedback to the discussion linked above.

Html Diff Visual Diff

Before Hydration

```
<div data-is-root-theme="true" data-accent-color="iris" data-gray-color="sand" data-has-background="false" data-panel-background="translucent" data-radius="large" data-scaling="95%" data-sentry-element="Theme" data-sentry-source-file="layout.tsx" class="radix-themes :hover">
<div data-sentry-component="DocsLayout" data-sentry-source-file="layout.tsx" class=":hover">
<div class="tw-app :hover" data-sentry-component="DocPage" data-sentry-source-file="index.tsx">
  <header class="bg-white h-[var(--header-height)] w-full z-50 border-b border-gray fixed top-0" data-sentry-component="Header" data-sentry-source-file="header.tsx">
    <style>
      :root {
        --header-height: 80px;
      }
    </style>
  </header>
</div>
</div>
</div>
```

After Hydration

```
<style>
:root,
.light,
.light-theme {
  --color-page-background: white;
}
.dark,
```
